SUMMARY

Site Reliability Engineer with hands-on experience building and operating Azure Sovereign Cloud regions for government tenants across France, Germany, and Singapore. Strong background in cloud automation, multi-region deployment, and reliability engineering (Azure, EV2, CI/CD, PowerShell, C#/.NET), with a focus on observability, resilience, and clean, automated delivery. Pragmatic, detail-oriented problem solver; fluent in English and Romanian.

SKILLS

Languages	C#, .NET, PowerShell, Java, C++, C, Python, Assembly x86, Haskell, SQL
Cloud & Platform	Microsoft Azure (Public & Sovereign Cloud), Azure Monitor, Bicep / ARM, IIS, App Services
DevOps & Tooling	CI/CD pipelines, EV2 (Express V2), Geneva Actions, multi-region deployment, Git
Data & Quality	MSSQL, SQL, NoSQL; unit, integration & automated testing, Microsoft Playwright
Methodologies	Agile / Scrum, CI/CD, OOP, Microservices, Distributed Systems

EXPERIENCE

Site Reliability Engineer II · Microsoft

Dec 2023 – Sep 2026

Automation and reliability engineering (C#/.NET, PowerShell, EV2) for standing up and operating Azure Sovereign Cloud regions for government tenants (Bleu, Delos, GovSG) across France, Germany & Singapore.

- Onboarded Delos and GovSG sovereign clouds into the XStore ecosystem — Geneva Actions authentication, Key Vault, Kusto routing, monitoring, deployment packaging and environment-specific configuration.
- Added Delos support for Geneva Actions EV2 deployments, replacing manual deployment processes with EV2-managed, staged rollouts.
- Implemented automation to migrate storage accounts — both account type and region — from Public Cloud into Sovereign Cloud regions, streamlining cross-cloud migration.
- Built SRP Manifest PR automation that generates Storage-SRP manifests and raises pull requests for new-cloud onboarding (OneDCMT region definitions as source of truth), eliminating an error-prone manual step for Bleu, Delos and GovSG.
- Streamlined Sovereign Cloud buildouts by automating DNS Zones and IP whitelisting, and enabled global XStore rollouts (France, Germany, Singapore) by automating storage account creation.
- Standardized MiniSRP workflows across Public and Sovereign Clouds, and re-engineered Bleu/Delos tenant onboarding from PowerShell to C#, reducing errors and speeding adoption.
- Strengthened SovCloud resilience through migration and remediation tooling, high-availability improvements, and reduced configuration drift via Dynamic Config enhancements.
- Authored EV2 automation guides and runbooks (Geneva Actions onboarding, MDS provisioning, certificate/Key Vault/dSTS/RBAC setup, troubleshooting), creating repeatable processes for future deployments.

Tools & Tech: C# / .NET, PowerShell, EV2, Azure (Monitor, Bicep / ARM), Geneva Actions, Azure DevOps, CI/CD, MSSQL, Git

Full-Stack .NET Developer · Collabera

Jan 2023 – Jun 2023

Full-stack .NET delivery focused on observability, CI/CD, and database performance.

- Improved system observability by integrating advanced telemetry and correlating APIs with vector contexts for faster troubleshooting.
- Reduced deployment risk and improved delivery speed through CI/CD automation, code reviews, and comprehensive testing.
- Enhanced database performance by redesigning the data model, removing duplicate records, and optimizing queries.
- Streamlined integration workflows and ensured consistent environments across development and production.

Tools & Tech: C# / .NET, SQL / MSSQL, CI/CD, telemetry & observability tooling, Git

Feature development and test automation for business-critical insurance applications.

- Built an internal application for the HR department that streamlined manual bureaucratic operations, reducing repetitive paperwork and saving time.
- Delivered reliable new features with unit and automated testing using Microsoft Playwright, minimizing regressions.
- Applied structured problem-solving to break down problems, evaluate solutions, and improve product stability.
- Identified and fixed recurring issues before release, improving reliability and customer satisfaction.

Tools & Tech: C# / .NET, Microsoft Playwright, automated testing, Git

EDUCATION

B.Sc. Computer Science

2019 – 2023

Politehnica University of Bucharest (UPB) — Faculty of Automatic Control and Computer Science.

SELECTED PROJECTS

- **COOL Compiler** — full multi-stage compiler for the Classroom Object-Oriented Language (Java).
- **Chess Engine** — minimax with alpha-beta pruning for fast, competitive play (Java).
- **Face & Emotion Detector** — real-time detection on Raspberry Pi 4 (Python, OpenCV); plus an x86 abstract syntax tree and a GCC-style C preprocessor.

TRAININGS & COURSES

- **Python Fundamentals** — Google Digital Garage (PyCharm, hands-on projects).
- **Android Fundamentals** — Google Digital Garage (Android Studio, hands-on projects).
