SKILLS

Languages C# · .NET · Java · C++ · C · Python · Assembly x86 · Haskell · SQL
Cloud & DevOps Azure (Public & Sovereign) · EV2 · Geneva Actions · CI/CD · Bicep/ARM · Git
Engineering Microservices · Distributed Systems · Backend · Full-Stack · Testing · OOP

EXPERIENCE

Site Reliability Engineer II

Microsoft | *Bucharest, Romania* | 12/2023 – 09/2026

- Onboarded Delos and GovSG sovereign clouds into the XStore ecosystem — Geneva Actions authentication, Key Vault integration, Kusto routing, monitoring, deployment packaging and environment-specific configuration.
- Added Delos support for Geneva Actions EV2 deployments, replacing manual deployment processes with EV2-managed, staged rollouts.
- Implemented automation to migrate storage accounts — both account type and region — from Public Cloud regions into Sovereign Cloud regions, streamlining cross-cloud migration.
- Built SRP Manifest PR automation that generates Storage-SRP manifests and raises pull requests for new-cloud onboarding, using OneDCMT region definitions as the source of truth — eliminating a manual, error-prone process for Bleu, Delos and GovSG.
- Authored comprehensive EV2 automation guides and runbooks (Geneva Actions onboarding, MDS provisioning, certificate management, dSTS/Key Vault/RBAC setup, troubleshooting and rollout processes).
- Streamlined Sovereign Cloud buildouts by automating DNS Zones and IP whitelisting, and enabled global XStore rollouts (France, Germany, Singapore) by automating storage account creation.
- Improved consistency and reliability across regions by automating MiniSRP workflows and deployments in both Public and Sovereign Clouds; accelerated readiness of new regions through efficient MiniSRP/SLV setup, debugging and deployment.
- Simplified Bleu and Delos GovSG tenant onboarding by rewriting pipelines (PowerShell → C#), reducing errors and increasing adoption speed.
- Strengthened SovCloud resilience through migration plans, remediation and high-availability improvements, and reduced configuration drift via Dynamic Config enhancements.

FullStack .NET Developer

Collabera | *Bucharest, Romania* | 01/2023 – 06/2023

- Improved system observability by integrating advanced telemetry and correlating APIs with vector contexts for faster troubleshooting.
- Reduced deployment risk and improved delivery speed through CI/CD pipeline automation, code reviews, and comprehensive testing.
- Enhanced database performance by redesigning the data model, removing duplicate records, and optimizing queries.
- Boosted team efficiency by streamlining integration workflows and ensuring consistent environments across development and production.

Junior System Developer

Signal Iduna | *Bucharest, Romania* | 08/2021 – 08/2022

- Delivered reliable new features by implementing unit and automated testing with Microsoft Playwright, minimizing regressions.
- Built an internal application for the HR department that streamlined manual bureaucratic operations, reducing repetitive paperwork and saving time.
- Used critical thinking and structured problem-solving to break down problems, evaluate solutions and make decisions.
- Improved product stability and customer satisfaction by identifying and fixing recurring issues before release.
- Learned and adapted quickly to new technologies and integrated them effectively into ongoing projects.

EDUCATION

Bachelor of Computer Science

Politehnica University of Bucharest (UPB) | *Bucharest, Romania* | 09/2019 – 07/2023

Faculty of Automatic Control and Computer Science

PROJECTS

- Compiler** — Full multi-stage compiler for COOL (Classroom Object-Oriented Language) in Java. (10/2022 – 01/2023)
- Chess Engine** — Java chess bot playing smart and fast using minimax with alpha-beta pruning. (03/2021 – 05/2021)
- Abstract Syntax Tree** — Implementation of an Abstract Syntax Tree in Assembly x86. (03/2021 – 05/2021)
- Mini Pre-Processor** — GCC-style preprocessor that resolves all defines and includes in a C file. (03/2022 – 03/2022)
- Face & Emotion Detector** — Real-time detector in Python with OpenCV on Raspberry Pi 4 with a camera module. (04/2022 – 05/2022)

CERTIFICATIONS

- Python Fundamentals** — Google Digital Garage workshop; hands-on projects in PyCharm, certificate earned. (10/2022 – 01/2023)
- Android Fundamentals** — Google Digital Garage workshop; hands-on projects in Android Studio, certificate earned. (10/2021 – 01/2022)
